

METHYLENE BLUE 10MG/ML

Sterile surgical dye for marking of tissues and operative findings and to check the tightness of urinary tract and colorectal sutures.

Medical device: Class IIa

Container: Pre-Filled Syringe

The product is a surgical blue dye and is especially useful in:

- Visualisation of sentinel lymph nodes to enable excision of potentially malignant lymph nodes during breast surgery
- Identification of renal cavity during surgery or percutaneous nephrolithotomy
- Identification of urinary or colonic fistula before surgical excision
- Marking of pilonidal sinus before surgical removal
- Preoperative marking of stoma prior to excision
- Check of the tightness of urinary tract and colorectal sutures

Recommended dosing of the product for each specific procedure is available in the patient information leaflet included in the pack.

Packaging

- Box containing 5 pre-filled syringes of 10ml

Orders

- The product may be ordered directly via e-mail to info@macurepharma.com, and can be delivered directly to the clinic, as the product is a medical device
