

## Macure Environmental Policy

### Introduction

Macure is a Danish, privately owned specialty pharmaceutical company that provides niche pharmaceuticals to patients and healthcare professionals worldwide. Although we do not directly manufacture our products, we are committed to ensuring that our environmental values are upheld throughout our supply chain. This Environmental Policy outlines our commitment to minimizing environmental impact, ensuring compliance with relevant regulations, and fostering sustainable practices across our global network of Contract Manufacturing Organizations (CMOs), pre-wholesalers, and distributors.

At Macure we aim to constantly reduce the environmental impact of our operations, as the planet's well-being is an important part of a healthier tomorrow in line with the Paris Agreement. We have therefore identified our key focus areas that are incorporated into our business strategy and operations, as we seek to foster environmental awareness and responsibility among our employees, customers, and partners.

### Compliance with Environmental Legislation

Macure is committed to ensuring that all production and distribution partners strictly adhere to the environmental protection legislation in force in the country of manufacture. We will work closely with our CMOs and other partners to ensure that they comply with all applicable environmental laws and standards, both locally and internationally, as part of our shared responsibility for environmental stewardship.

### Pollution Prevention and Waste Reduction

At Macure, we acknowledge the potential harm that chemicals and toxic substances from pharmaceutical production can cause to the environment. We routinely request information from our suppliers on their waste management processes and procedures to ensure waste is handled in a way that prevents environmental harm. Minimizing waste and increasing recyclability remain core priorities, and we encourage suppliers to focus on removing PVC and phthalates from their packaging. Our shared objective is to prevent environmental contamination and ensure responsible management of hazardous substances.

### Preventing API-Related Wastewater Contamination

Macure aims to minimize water use in production, ensuring no waste. We require all manufacturers to have effective wastewater management processes and treat chemical wastewater in line with local and global standards. Furthermore, Macure recognizes that API (Active Pharmaceutical Ingredient) production can impact wastewater systems and nearby ecosystems.

We are committed to minimizing these risks through strict operational controls in our own activities and by encouraging suppliers to adopt wastewater protection practices. We work with CMOs to ensure proper handling, storage, and disposal of APIs to prevent environmental release.

We request Predicted No Effect Concentration (PNEC) values and related analysis reports, with a focus on ensuring our suppliers are aware of the risks of API release into wastewater. We place heightened emphasis on collecting comprehensive data from suppliers regarding their wastewater management processes, along with certifications of good API practices.

### **Sustainable Supply Chain and Transport**

Our goal is to establish long-lasting relationships with our partners based on mutual respect for environmental sustainability. We will actively engage with our network of CMOs and pre-wholesalers/distributors to promote the use of environmentally friendly materials, efficient resource management, and responsible waste disposal practices. By working together, we aim to minimize our collective environmental footprint.

Our environmental impact primarily arises from our supply chain. We prioritize working with logistics and distribution partners who meet strict environmental standards, including EURO-6 vehicle compliance and ISO 14001:2015 certification.

### **Continuous Improvement and Innovation**

Environmental protection is a continuous process, and we are committed to driving improvements in our environmental performance. Macure will work with our partners to set measurable environmental objectives and targets, monitor progress, and regularly review our practices to ensure ongoing compliance and innovation in sustainable practices.

### **Employee and Partner Engagement**

Macure believes that environmental responsibility is a collective effort that extends beyond our company. We will provide our employees and partners with the necessary resources, training, and support to understand and uphold our environmental policy. We encourage collaboration and the exchange of ideas to enhance our environmental initiatives.

### **Stakeholder Collaboration and Commitment**

Macure is dedicated to protecting the environment and ensuring that our global operations reflect our commitment to sustainability. We recognize the importance of working with all stakeholders, including suppliers, customers, healthcare professionals, and local communities, to achieve our environmental objectives.

We share our environmental practices openly and work with stakeholders across our global network to meet our sustainability objectives. Suppliers must forward this Environmental Policy to their first-tier sub-suppliers to help ensure our principles are applied throughout the supply chain.
